## Research Medical Library wins national award

[The Research Medical Library](The Research Medical Library) earned the 2021 MLA Research Advancement in Health Sciences Librarianship Award.

This prestigious award is given by the [Medical Library Association](Medical Library Association) to recognize health sciences libraries that make outstanding contributions to advancing health information research and evidence-based practice.

Over the past 12 months, our library has demonstrated its excellence in many ways. Scientific editors have edited more than 800 manuscripts and 238 grants, totaling more than $109 million in potential funding for our institution; our librarians have hosted [more than 400 consultations](more than 400 consultations) to guide faculty, staff, and students on topics such as literature searching, writing, publishing, EndNote, resource access, the NIH Public Access Policy, and others.
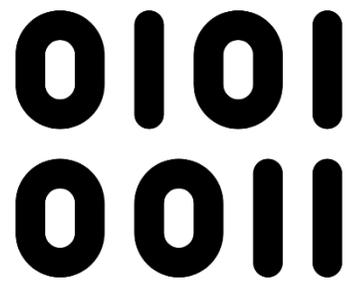

Many of you are aware of the library's exceptional ability to identify relevant and targeted literature for our researchers and more recently, for the COVID-19 Research Task Force, but in the past year, library staff has also done a superb job of supporting workforce members who've transitioned to a remote working environment. Tool Time Tuesdays, a 30-minute virtual workshop created last year to teach employees about various productivity and communication programs, continues to attract more than 100 participants every week.

The staff has worked tirelessly through the pandemic and even our recent winter storms to make sure every employee can do their best work for MD Anderson no matter the challenge at hand. For these reasons and more, they will be celebrated at the upcoming virtual MLA'21 Conference in May.

# Current Protocols

This resources is available to all MD Anderson staff. The Current Protocols collection includes 24,000 techniques, procedures, and practical overviews in bioinformatics, cell biology, cytometry, immunology, protein science and more.

**O'Reilly for Higher Education**

offers eBooks, videos, and learning paths covering data engineering, data science, AI, VR, visual design and more. Create a free account at this link: www.oreilly.com/library/view/temporary-access/.

# CLASS: Google Scholar: Advanced Search Tips

Thursday, April 15; 10:30 - 11:00am

REGISTER HERE

Google Scholar works differently than Google. Learn some secret techniques to improve your search results. We'll show you how to search efficiently and how to access the full text of your results.

# CLASS: Rethinking Online Education

Wednesday, April 28; 10:00 - 11:00am

REGISTER HERE

In this Education Week event, Dr. Mark Picus and Laurissa Gann will explore and demonstrate innovative techniques that will energize your online teaching and engage your students.

**Book a consultation with a scientific editor or librarian.**

Choosing a journal
Database searching
EndNote
Literature reviews or systematic reviews
NIH Public Access Policy or PMCIDs
Preparing to write a manuscript/grant
Writing a research article/grant proposal
