ITHENTICATE

iThenticate: Check your manuscript before you submit.

Most major publishers run what's called a similarity report on all new manuscript submissions. The purpose of a similarity report is to identify the percentage of the manuscript text that may overlap with one or more published articles. Publishers are looking for a quick way to identify plagiarism or poor citation practices and a similarity report is a quick way to find potential problems. Publishers may reject manuscripts that receive a high similarity score. How can authors avoid this? Start by running a similarity report before submitting your manuscript.

The library offers access to [iThenticate](#), which allows authors to run a similarity report on uploaded documents. MD Anderson faculty, staff, and students can request a free, private iThenticate account by emailing the library at [RML-Help@mdanderson.org.](mailto:RML-Help@mdanderson.org)

With your iThenticate account, upload a file to iThenticate. iThenticate compares submitted manuscripts to 37 billion webpages, 92 million off-line works, 300,000 dissertations, and 37 million journal articles. Results take a few minutes to generate.

MORE ARTICLES INSIDE THIS ISSUE:

PolicyMap – 2
Nature Journals – 2
SHP Textbooks – 2

Once generated, a percentage appears next to the manuscript name. Select the percentage to see the full report. iThenticate shows you which parts of your manuscript may overlap with previously published sources. You can also print or download your iThenticate report to share with others. [View a full demo on the iThenticate website.](#)

NEW! SELF-PACED DATABASE SEARCH BASICS COURSE

[*Enroll in this course*](#)

The library is now offering a self-paced course in Study on database searching. The course teaches learners how to formulate a question, select resources to search, create a search strategy, and evaluate search results. MD Anderson staff and students can enroll in the course and move through the modules at their own pace.
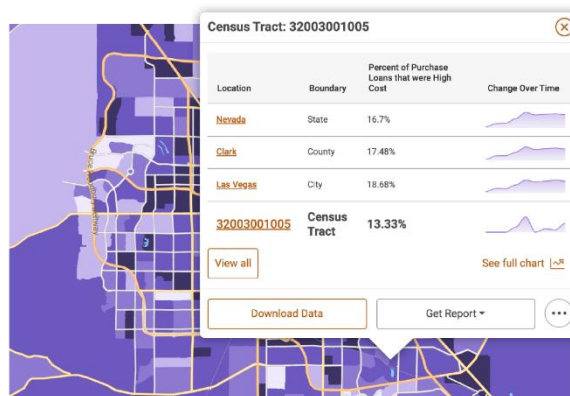

POLICYMAP

Create your own maps

Explore the latest version of PolicyMap, which allows users to create maps related to housing, crime, mortgages, health, jobs, demographics, and education. PolicyMap provides access to data in interactive maps, tables, charts, or reports and allows users to upload data.

NEW JOURNAL FROM NATURE

Access journal subscriptions are accessible 24/7 through the library's website.

- Nature Astronomy
- Nature Climate Change
- Nature Electronics
- Nature Energy
- Nature Geoscience
- Nature Machine Intelligence
- Nature Photonics
- Nature Physics

SHP TEXTBOOKS ONLINE

https://mdanderson.libguides.com/SHPreserve

School of Health Professions students can access most class textbooks through the SHP Textbook Guide. The library has purchased most of the textbooks in an eBook format, but unfortunately, not all books are available electronically for an institutional subscription. Students should contact the library with questions about accessing and downloading eBooks.
